## Job Listing Portal Project Report

### 1. Introduction

**Amdox** is a modern, full-stack job listing portal designed to bridge the gap between job seekers and employers. Built with a focus on user experience and real-time functionality, the platform offers a streamlined process for posting jobs, managing profiles, and tracking applications.

The application leverages a serverless architecture using Google Firebase, ensuring scalability, security, and real-time data synchronization.

### 2. System Architecture

The system follows a client-server architecture where the client is a Single Page Application (SPA) driven by vanilla JavaScript, and the "server" is managed by Firebase's Backend-as-a-Service (BaaS) infrastructure.

#### Core Components

- **Frontend:** HTML5, CSS3, JavaScript (ES6+)
- **Authentication:** Firebase Auth (Email/Password, Session Management)
- **Database:** Cloud Firestore (NoSQL Document Store)

- **Storage:** Firebase Storage (Resume/File Management)

## 3. Key Features

---

### 3.1 Authentication & Roles

The platform supports distinct workflows for two user types:

- **Job Seekers:** Can browse jobs, apply, and manage their professional profile.
- **Employers:** Can post job openings, view applicants, and manage company details.

Users are authenticated securely, with role-based redirection upon login (Seekers to Job Feed, Employers to Dashboard).

### 3.2 Job Seeker Features

- **Profile Management:** Edit personal details, skills, experience, and upload resumes.
- **Smart Job Search:** Filter jobs by keyword, location, and job type.
- **One-Click Apply:** Streamlined application process with status tracking (Applied, Shortlisted, Rejected).
- **My Applications:** A dedicated dashboard to view the status of all submitted applications.

### 3.3 Employer Features

- **Company Profile:** Manage company branding and contact information.
- **Job Posting:** Create detailed job listings with requirements and salary info.
- **Applicant Management:** specific view to see all candidates for a job.
- **Status Control:** Ability to "Shortlist" or "Reject" applicants, which updates in real-time for the seeker.

## 4. Database Design (Firestore)

The data is structured in NoSQL collections to ensure fast retrieval and flexibility.

| Collection   | Description                                          | Key Fields                                                        |
|--------------|------------------------------------------------------|-------------------------------------------------------------------|
| users        | Stores user profiles for both Seekers and Employers. | uid , name , email , userType , skills , resumePath , companyName |
| jobs         | Contains all active job postings.                    | employerId , title , description , location , salary , createdAt  |
| applications | Links candidates to jobs with status.                | jobId , candidateId , status , appliedAt                          |

## 5. Technology Stack

Frontend

HTML5, CSS3, Vanilla JS

Backend

Firebase (Serverless)

Database

Cloud Firestore

Hosting

Local / Firebase Hosting

## 6. Conclusion & Future Work

Amdox successfully demonstrates a functional, modern job portal. It solves the core problem of connecting talent with opportunity through a clean, responsive interface.

Future enhancements planned:

- Email notifications for application status updates.
- Advanced recommendation algorithms for job matching.
- Integrated chat system for direct Employer-Candidate communication.
- Mobile application development (React Native/Flutter).
